

RESTORATIVE JUSTICE

ONLINE TECHNOLOGIES THAT LET YOUR OFFICE MANAGE AND MONITOR DIVERSION AND PROBATION CASES

The Advent eLearning platform is much more than just a learning management system. It also includes a full suite of case management features to keep your restorative justice programs on track.

When combined with effective evidence-based education programs, restorative justice programs offer criminal justice professionals advantages over incarceration and traditional sentencing, including:

- Holds offenders accountable for their criminal behavior
- Makes offenders consider and repair the damage they've done to their communities
- Makes offenders consider and repair any direct damage they've done to victims
- Can be used both with and in lieu of fines and fees
- Reduces recidivism by reducing the collateral consequences of incarceration.

With Advent eLearning's restorative justice features, criminal justice professionals can create effective case management functions within their agencies—without relying on costly and poorly-managed private probation companies.

COMMUNITY SERVICE MONITORING

Advent eLearning lets your staff establish, manage and report community service requirements of your diversion and probation monitoring programs.

Your office pre-builds profiles and terms for all approved non-profit agency participants within your community. Each defendant is then assigned appropriate hours for each approved agency, and eLearning ensures the entire process is managed from end-to-end to keep the defendant on track to complete service.

AUTO INSURANCE MONITORING

Advent's unique auto insurance monitoring allows your office to manage diversion and probation terms for drivers charged with driving without insurance.

Once boarded into the program, Advent interfaces with insurance carriers to ensure defendants are monitored each month, for an appropriate period of time, to ensure they maintain required coverage.

VICTIM RESTITUTION

The Advent eLearning platform and payment processing systems allow your staff to manage victim restitution arrangements with ease. Built from many years of managing merchant restitution in bad check programs, the Advent system includes full functionality for defendant payment acceptance and processing, victim payment disbursement, account balancing, and reconciliation reporting.

PROBATION MONITORING

The platform now also includes full functionality to give your staff the tools for complete case management of in-house probation programs.

Your staff can assign and monitor both online and classroom education and counseling requirements, manage appointments, monitor community service, manage restitution, and even manage external vendor activities for lab testing, criminal histories, and more.

The Probation Monitoring functionality includes the full suite of Advent eLearning communications, document management, and reporting technologies to keep all stakeholders in the loop.

GET STARTED

You can review the Advent eLearning Restorative Justice technologies at no cost or obligation to your organization. Contact us today for a trial account or guided product demonstration.
